

1. Go to URL <https://www.enterprisedb.com/downloads/postgres-postgresql-downloads> and download postgresql latest version as per your machine specifications.
2. For installation just click on next, next and so on. Installer will ask you to provide a password, just provide any password and remember it for later part.
3. After installation is done, it will prompt you at the window as below. Untick the stack builder as we won't need it.

4. Go to URL <https://dbeaver.io/download/> and select your machine configurations for installation of Dbeaver.
5. While installing click next, next and at the window below, select below components to install. Click finish and the setup will be done.

6.
